For current data see website www.cab.de/en/electronics

### **Off-cut Remover HEKTOR 2**

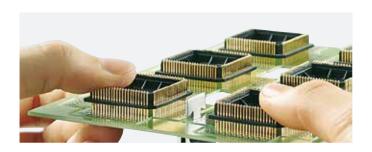

Hektor separates milled PCBs carefully and fast. The off-cut material is removed smoothly and precisely. The matrix consists of two parts. This ensures easy and cost-saving change of the blades. Compressed air is used for the separation process. The operating pressure can be set on the machine. When the foot switch is pressed, the off-cut is punched out. The off-cuts are collected in the collecting box. When the gate is opened the waste material can be extracted.

### **Safe Operation**

The PCB is slipped with its milled groove over the blade and is placed onto the matrix. The off-cut is pulled under the blade. When the foot switch is pressed, the off-cut is punched out and the waste material is collected inside the machine.

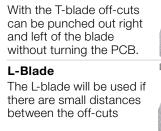

Technical Data		
Separation type		Punch blade
Operation		by hand
PCB thickness		max. 2.5 mm
Air connection		1/4"-plug-in coupler
Operating pressure		typical 4 bar

MAESTRO 2 separates small amount and prototype series of PCBs fast and economically. The compact and stable aluminum frame requires only a minimum of space.

### **MAESTRO 2**

is the reasonable model to start with, suitable for smaller numbers of PCBs.

The PCB is fed manually between the circular blades and is thereby separated.

### **MAESTRO 2M motorized**

Separates large numbers of PCBs without fatigue of the operator. The lower circular blade is driven by a motor.

The PCB is fed between the circular blades where it is seized

The PCB is fed between the circular blades where it is seized, transported and separated. Three different speeds can be selected.

### **Save Operation**

The clearance between the upper guide **1** and the lower guide **2** is adjustable to ensure that the PCB is only fed through the machine in the pre-scored groove.

<b>Technical Data</b>			
Separation type		Component side circular blade Solder side linear blade	
Operation		by hand	
Separation length		max. 450 mm	
Material		FR4	
Temperature/	Operation	+ 5 - 40°C / 10 - 85%	
Humidity	Storage	+ 0 - 60°C / 20 - 80%	
not condensing Transport		- 25 - 60°C / 20 - 80%	
Weight		22 kg	
Dimensions H x D x W		455 x 700 x 350 mm	
Approvals		CE. FCC class A	

Maximum height of components next to the groove.

Increase in external dimensions after separation.

The pre-scored grooves can be interrupted by cutouts with a length of up to approx. 5 mm.

If components project above the groove, the linear blade needs to be cut out. In such a case contact us.

MAESTRO 3E separates both small and large pre-scord PCBs. The table and the rest can be continuously adjusted to the most suitable working position.

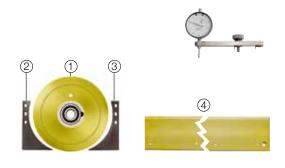

The slit between the linear blade and the rest can be adjusted to ensure that the side strips fall through and are sorted out.

## **Safe Operation**

The PCB is placed with its pre-scored groove onto the linear blade and the circular blade is then drawn by hand across the PCB.

The clearance between the upper guide and the linear blade is adjustable to ensure that the PCB is only separated in the pre-scored groove.

# **PCB Separator MAESTRO 4S**

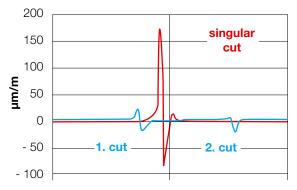

### Stress-free separation of pre-scored PCBs

The MAESTRO 4S separates both large and small PCBs quickly, economically and without stress.

Cutting with only a single traverse of the pre-scored groove causes tensile and compressive stresses that can damage sensitive components near the groove. Even a second traverse of the groove accompanied by an adjustment of the blade distance substantially reduces the tensile and compressive stresses. This significantly improves the quality of the populated PCBs.

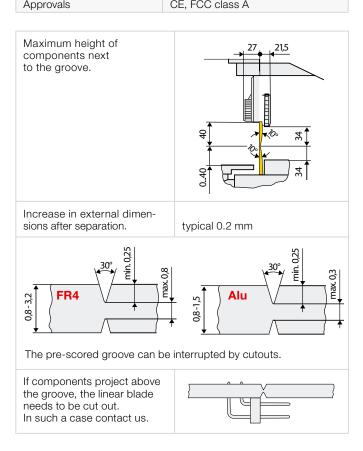

### The most important features

- The blade distance is entered on the operating panel and its adjustment is motor-powered.
- Up to nine programs can be stored.
- The materials used for PCBs are FR4 and aluminum
- The continuously adjustable separation length is set with limit switches.
- The accumulated cutting performance is displayed for the purpose of scheduling preventive maintenance of the blade.

Material: FR4 1,5 mm, rest thickness ca. 0,6 mm

# **Conveyor belt**

### **Conveyor Belt**

The separated PCBs are placed individually on the conveyor belt, and transported out to the side of the machine. The speed is adjusted according to the size of the PCB. A light barrier at the end of the conveyor belt detects the arrival of PCBs and stops the belt.

For separating aluminum with the MAESTRO 4S the standard circular blade with special blade settings can be used. More information in the operation manual and at **www.cab.de/en** 

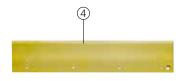

Various aluminum alloys are used in the manufacture of PCBs. We recommend submitting sample PCBs with the order in order to optimize the cutting geometry and for the correct adjustment of the circular blades.

The circular and linear blades must be precisely guided across the entire separation length in order to achieve stress-free separation and a long service life. The measuring system is mounted on a carriage for setting and regularly checking the parallelism.

# **PCB Separator MAESTRO 5L**

by a loading station or an external conveyer belt. After separation, the PCBs are placed on the installed conveyor belt. The machine can be installed in an assembly line in conjunction with a SMEMA interface.

The height of the base frame of the MAESTRO 5L can be adjusted optimally for each application.

A connection is provided for an extraction and filtering system.

# There is a system behind it

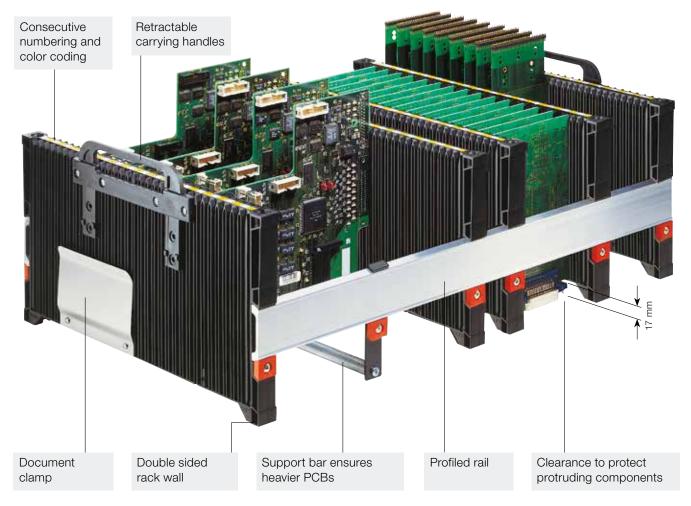

The cab PCB magazines can be filled when standing vertical or laying horizontal. The system is totally adjustable for width and can be assembled according to your individual requirements. For different size PCBs we offer PCB magazines with a height of 100, 180 and 300 mm.

All magazines have 32 slots, each with a 10 mm clearance between them, thereby providing maximum use of available space.

### Secure

The precision molded slots are funnel shaped at each end to simplify the insertion of each circuit board.

The location of each mounting slot is shown by yellow and white positioning strips. These enable boards to be loaded while avoiding the risk of being loaded by hand in the wrong position.

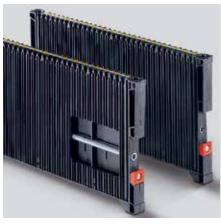

# PCB Magazines Series 100 / 180 / 300

### Fast and easy assembly

The magazine walls can be secured to the profiled rails in any position required. Two identically sized circuit boards are inserted between the walls, into the adjustment slots at the extreme ends of each wall. The second wall is then pressed firmly onto the boards and screwed tight.

### Rigid and stable

The magazine walls are constructed in sandwich form, and are therefore particularly rigid. For heavy mechanical and thermical force the magazine walls can additionally be reinforced by the use of a steel rod.

### Slot lock

To prevent damage to the PCB board during insertion, we offer slot locks which cover slots not in use.

### Stackable

At the corners of each magazine are male and female connectors which allow the racks to be stacked upon another. The lower edge of each magazine-side has a molded recess which allows the magazine to be gripped and lifted without problem.

### **Vertical mounting**

Before soldering, the circuit board must be stored horizontally. The magazine can therefore stand vertically.

### **Transport containers**

For transport purposes, the PCB magazines can be loaded into containers. These containers have norm sizes of 600 x 400 mm and 400 x 300 mm. Retractable handles enable the magazines to be removed with ease.

# PCB Magazines Series 100 / 180 / 300

# with 32 slots

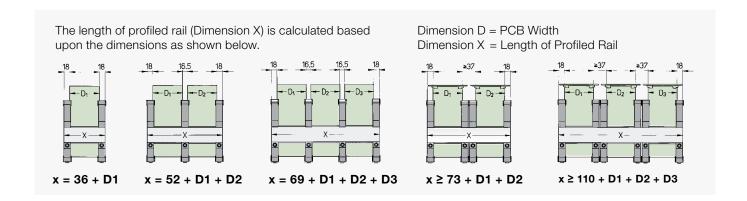

### Flexing of the magazine walls under loading

When the PCB Magazine is correctly assembled, each side wall may flex less than 1,0 mm to ensure a secure mounting of the PCB. The flexing was calculated using 16 circuit boards, with a clearance of 20 mm between each other and a weight per board of 500 g.

Critical loading can occur as follows:

- 1. When the magazine is laid on its side on a flat surface and then lifted.
- When being transported in the vertical position and the position is changed to the horizontal.

# PCB Magazines Series 100 / 180 / 300

# **Delivery program**

# for automated assembly lines

### **Automation Requires Precision**

Precision, stability and flexible handling are important features for the use of the PCB Magazines in automated assembly lines.

The stable and robust frame construction guarantees a long lasting use of the cab magazine in your production. The rack walls are manufactured from conductive material.

### Metal magazine

For high mechanical or temperature use we offer the magazine with metal rack walls.

# PCB Magazines Series 600 / 700

### Series 600 - Width adjustment by screw clamp

The series 600 is cost effective alternative with a simple width adjustment. By backing off the four screw clamps the moveable rack wall can be pushed to the necessary PCB width.

### Series 700 - Width adjustment by gear belt

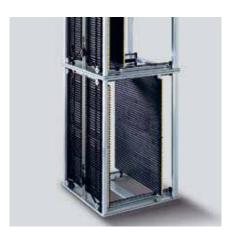

Handling different PCB sizes the magazines have to be adjusted to the PCB width quite often. The PCB Magazines of the series 700 are adjusted to the necessary PCB width within seconds.

### **Transport safety**

To secure the PCBs while transporting the magazine, a safety bar is mounted on the front and back side of the rack

### Stackable

The magazines can be stacked and secured space saving by four support guides on the top of the plate.

### Reversible

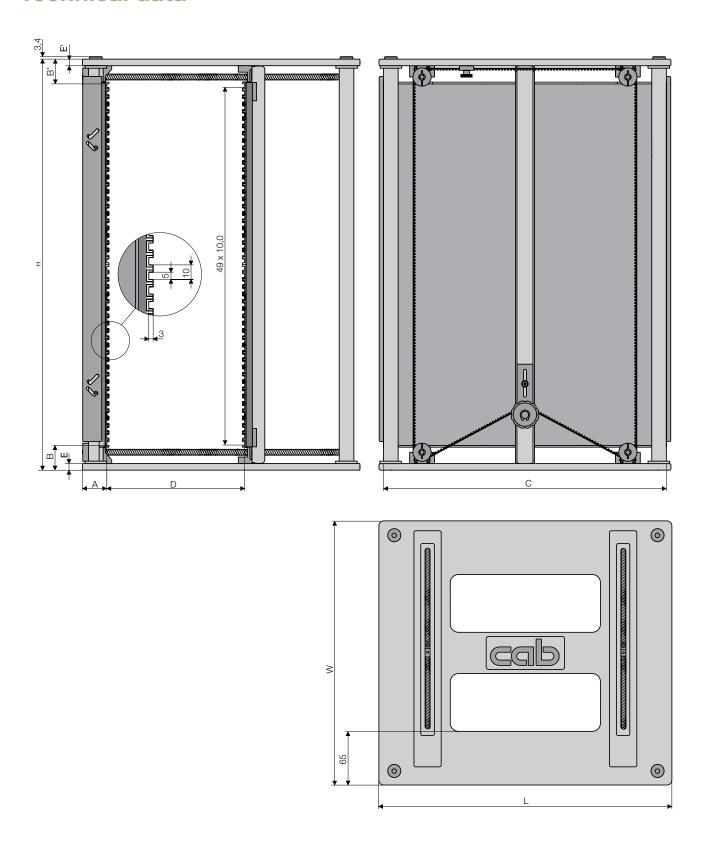

Through to the vertical symmetry all magazines can be placed upside down to work on double sided PCBs. The stacking locator knobs must be replaced.

### Slot lock

To lock the slots of series 600.1/2 and 700.1/2 PCB magazines

ESD Prote	ction cover Pe	rmastat conductive discharge				

<sup>\*</sup>Measured from rack wall to frame

# **ESD Protection cover**

Permastat® ESD protection cover, stable and tearproof

Color: pink

Thickness: 150  $\mu$ m (PU = 10 pcs.)

For further information see page 21.

# **Special magazines**

cab supplies special magazines on request for specific applications. Please contact us.

# Twin magazine for long PCBs

The PCB magazines are mounted with torsion resistance so that you can, for example, safely store and transport PCBs with a length of up to 787 mm in two PCB magazines of type 702.2-2.

Rack wall material: polycarbonate.

Delivery: fully assembled.

		Tempe	rature					PCB				
		ertions	<sup>0</sup> , Ambient	ight		xtern suren	al nents		dth D	Length C		
Туре	Part No.	O Inser	ο	g Weig	L mm	W mm	H mm	min. mm	max. mm	max. mm

702.2-2	8916722	130	100	12,7	800	320	563	40	250	787		
703.2-2	8916732	130	100	13,5	800	380	563	40	310	787		

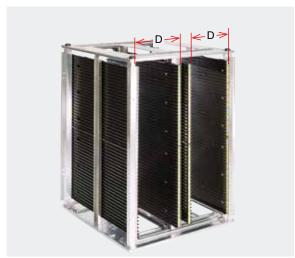

# **Triple magazine for long PCBs**

The PCB magazines are mounted with torsion resistance so that you can, for example, safely store and transport PCBs with a length of up to 1187 mm in three PCB magazines of type 702.2-3.

Rack wall material: polycarbonate.

Delivery: fully assembled.

		Tempe	rature						PCI	3

### Double capacity through parallel slide-in units

A series 600 magazine can hold up to 100 PCBs. PCB magazines with 2 side-by-side slide-in units can be used for holding narrow PCBs. Rack wall material: polystyrene, polycarbonate, metal.

		Temperature					РСВ		
		Insertions	Ambient	External measurements			Width D		Length C
Туре	Part No.	SII°	οAπ	L mm	W mm	H mm	min. mm	max. mm	max. mm

# **Special magazines**

# Low height

PCB magazines with a low height, for example, for use in annealing furnaces. Reducing the height also prevents overloading with heavy PCBs, or if goods holders are used.

Rack wall material: metal.

		Temperature								
		ဂ္ဂ Insertions	ဂို Ambient	Weight	External measurements			sws.	Gear belt

## **ESD** protection cover

Permastat® ESD protection cover, stable and tearproof, protects the PCBs in the magazine from contamination.

Туре	Part No.
601/701	8916411
602/702	8916412
603/703	8916413
704	8916414
706/716	8916416
707/717	8916417

Protection cover for further models on request

### **Slot lock**

Clipping and removal without additional tools; When slot locks are in use, maximum PCB width adjustment is reduced by 3 mm.

Pos.	Part No.	Product	Pack size		
1.1	8916571	Slot lock 1 (onefold)	100		
1.2	8916575	Slot lock 5 (fivefold)	20		

# Notes

# **Product overview**

Label printers MACH1, MACH2

in the lower price segment

Label printers SQUIX 2

Industrial device for print widths up to 57 mm

**Label printers XD4T** for double-sided printing

**Print modules PX** 

to be integrated in labeling machines

Label dispensers HS, VS

for horizontal or vertical dispense

Label printers MACH 4S

where little space is available

Label printers SQUIX 4

Industrial device for print widths up to 108 mm

Label printers XC

for two-color printing

Labels

made from more than 400 materials

Labeling heads IXOR

to be integrated in labeling machines

Label printers EOS1

Desktop device for label rolls up to diameter 152 mm

Label printers SQUIX 6

Industrial device for print widths up to 168 mm

Print and apply systems Hermes+

for automation

Ribbons

in wax, resin and resin/wax qualities

**Marking lasers** 

with output powers 10 to 50 Watt

### Label printers EOS4

Desktop device for label rolls up to diameter 203 mm

### Label printers A8+

Industrial device for print widths up to 216 mm

**Print and apply systems Hermes C** for two-color printing and applying

Label software cablabel S3

Design, print, control

- Headquarter and fabrication in Germany
- to International subsidiaries

There are furthermore 820 distribution partners in more than 80 countries.
