ROLLERS HOLDER WORKTOP

The rollers holder worktop (code **8301.027**) is a practical and robust accessory that allows the correct positioning of the rolls of SMD components with reference to the County EVO digital piece counters (compatible with models: **8301.081**/ **8301.082**/ **8301. 083**/ **8301. 084**).
The pins are hooked to the work frame with frictioned discs, this solution allows you to easily change their position according to the diameter of the rolls. The handle (optional, cod: **8301.030**) allows the tape to be easily rolled up on the empty aluminum spool (optional, cod: **8301.021**) after counting and easily rewinding to the original roll.

Cod. 8301.027	Worktop with 2 pins
Cod. 8301.030	Handle (optional)
Cod. 8301.021	Empty aluminum spool (optional)

Tecnichal features:
Dim (mm): 270x500
Weight (Kg): 1,74
Materiale: steel
Colour: black

Advantages of worktop

1) The friction system avoid unintentional unwinding of the tape from the reels.
2) Easy routing of the tape in the counting head with correct pin distance.
3) The solid anchorage of the pins to the surface and therefore to the County Evo ensure excellent stability of the rolls without danger of accidental tilts, to the advantage of regular sliding of the tape, decreasing the risk of breaks or wrong winding the roller.
